Employment History

K-Force/SAIC, Web Developer and Software Engineer, 2007 to 2008

On a DoD-wide Enterprise Architecture development project, did the following:

- Working with IV&V consultants, identified flaws in several products, and designed specific solutions that will convert items generally considered useless into major assets that will provide both end-users and internal users with very valuable ad-hoc search capabilities.
- Designed a comprehensive approach to maximize exploitation of the static-web-page portion of the produ using JavaScript, XML, and XSLT. This approach will enable DoD to establish active-page-like products and build a business case for a full active-page-based system for architecture delivery.
- Designed and initiated a program of customer research, using an Access database and broad experience w customer relations gained in 15 years development of commercial hospital MIS and patient care systems.
